

Where innovation meets requirements:

Accenture Hackathon as the backbone of functional excellence

CLARITY TODAY, EXCELLENCE ALWAYS

ARTIFACTS TO PRODUCE

01

AS-IS VS TO-BE

AS-IS documents the pain points in today's process. TO-BE defines the target state - the blueprint every developer, tester, and stakeholder builds toward.

02

FUNCTIONAL REQUIREMENT DOCUMENT

Defines what the system must do - covering all functional requirements derived from business needs, with acceptance criteria and MoSCoW priorities.

03

REQUIREMENTS TRACEABILITY MATRIX

End-to-end traceability from BR → FR → NFR → Test Coverage → UAT scenarios, enabling forward and backward traceability.

04

USE CASE & USER STORY REGISTER

Structured register of all use cases and user stories, with actors, pre/post conditions, and links to functional requirements.

05

GO LIVE CHECKLIST

Don't cross the finish line without your full artifact pack - produced, checked, and ready.

In fast-paced hackathon environments, structured functional analysis keeps teams aligned on what to build, reduces rework, and ensures every feature traces back to a real business need.

BE AN FA AI-AUGMENTED ANALYST

Use Claude as your assistant to work more rapidly, efficiently, and intelligently — accelerate documentation, surface gaps, and deliver high-quality requirements under hackathon timelines.

- Analyse requirements & identify gaps
- Automate FRD & RTM documentation

- Generate process flows & use cases
- Improve quality with AI-driven insights

Need clarity? Clarification on any requirement or process can be requested directly from the relevant **Subject Matter Expert (SME)** — raise your question early to avoid rework and keep the solution on track.

Development expectations: What We Look For in your deliverables

DEVELOPMENT DELIVERABLES

01	02	03	04	05	06	07
						
GITHUB PROJECT	GIT COMMIT DEADLINE	GREAT UI/UX	DIGITAL ACCESSIBILITY	ENGINEERING BEST PRACTICES	SOLID ARCHITECTURE	CODE OWNERSHIP
Project must be available on a GitHub repository	Last commit must not be after the end of the hackathon	A polished, intuitive user experience that delights users	Comply with digital accessibility standards	Follow software engineering best practices throughout	Well-structured, scalable and maintainable codebase	Take full ownership of the code you produce

In fast-paced hackathon environments, clean architecture, solid engineering practices, and code ownership are what separate great solutions from good ones.

BE A CRAFTSMAN SOFTWARE ENGINEER

Write clean, maintainable code — take ownership, apply best practices, and ship solutions you are proud of.

Review code & enforce standards

Design scalable architecture

Write clean & documented code

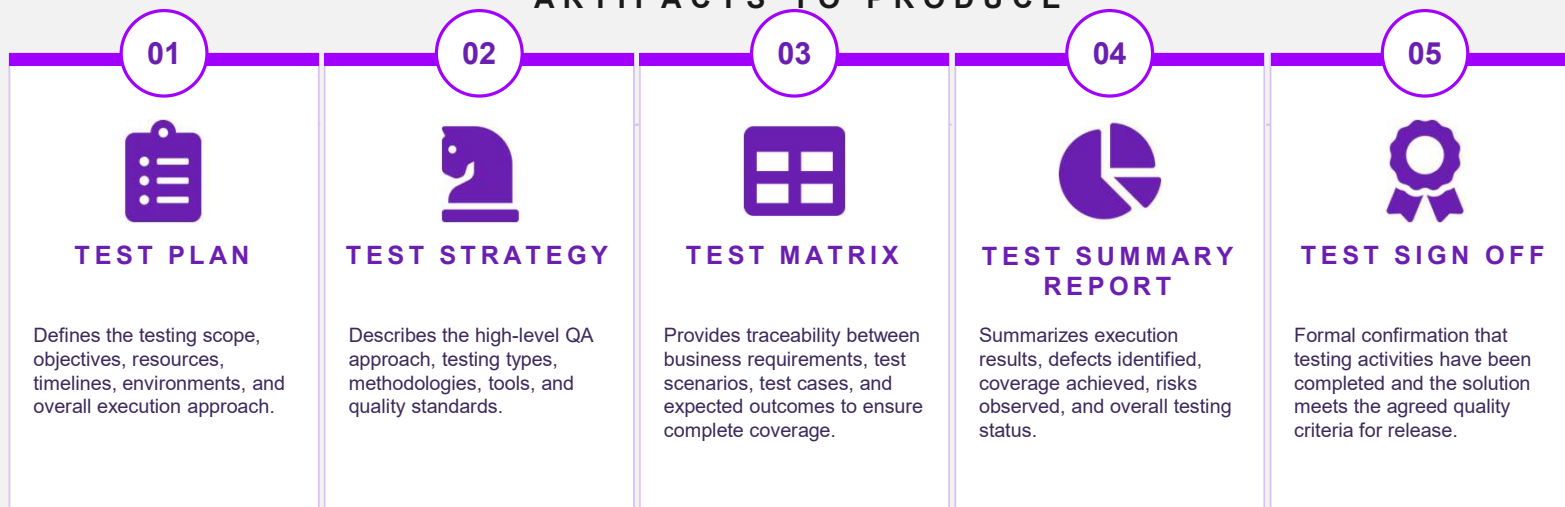

Deliver with pride & ownership

Where innovation meets quality: Accenture Hackathon as the backbone of software excellence

QUALITY TODAY, EXCELLENCE ALWAYS

ARTIFACTS TO PRODUCE

In fast-paced hackathon environments, structured QA documentation helps teams stay aligned, prioritize risks, and deliver stable, high-quality solutions under tight timelines.

BE A QA AI-AUGMENTED ENGINEER

Use Claude as your assistant to work more rapidly, efficiently, and intelligently — accelerate testing, automate documentation, and elevate quality.

Analyze requirements & find gaps

Automate test documentation

Generate test scenarios & cases

Improve quality with AI insights
