

Technical Excellence

Criteria	Description
Architecture & Design	Clear, scalable architecture, proper layering, sensible technical choices, database design
Technology Usage	Effective use of tools, frameworks, APIs, cloud, AI, automation, etc.
Code Quality	Clean, readable, maintainable code, good structure & naming
Innovation & Technical Creativity	Novel technical approach, smart problem-solving beyond basics

Functional Value

Criteria	Description
Problem understanding and analysis	"Understanding of the product goals, constraints & definition of MVP. Gap Analysis (AS-IS & TO-BE)" Key Deliverables: (Problem statement, scope, AS-IS / TO-BE)
Requirements/ Functional Specification	Clear, testable, traceable requirements Key Deliverables: 1. FRD - Functional Requirements - Documents: How the product should behave (FRs & NFRs), including wireframes. -User Stories / Epics / Features - With clear acceptance criteria 2. RTM: Requirements Traceability Matrix - Linking business - Functional -Test 3. Functional Data Requirements - Inputs, Outputs, rules, validations
Functional Design & Solutioning	Build ready functional blueprint for development teams Key Deliverables: Process & Journey Diagrams - TO-BE: User and system interactions (End to end functional behavior)
Product Build & Implementation Support	Build ready functional blueprint for development teams Key Deliverables: 1. Functional Clarifications (prioritisation, dependencies identified to start development related to MVP) 2. Q&A Logs
Delivery Readiness	Business-ready product launch Key Deliverables: 1. Go Live Checklist
Innovation & Continuous Improvement	Stabilized Product & enhancement recommendations (for future evolution) Key Deliverables: 1. Lessons Learned / Functional Retrospective 2. Product Improvement Recommendations Innovation Opportunities Log Identified functional improvement ideas beyond baseline requirements: Automation opportunities/Data usage & reporting/user experience/process efficiency

Quality & Testing

Criteria	Description
Test Strategy	Defined approach and test techniques (functional, automation, AI-based, etc.) Key Deliverables: Test Strategy, Test plan
Test Coverage	Coverage across flows, edge cases, negative scenarios Key Deliverables: Test matrix, Test scenarios, Test cases
Defect Handling & Stability	Application stability, error handling, low critical defects Key Deliverables: Defect report, test summary report, test sign off (Release note)
Quality Mindset	Built-in quality, data validation, non-functional aspects
Innovation & Creativity	Automation implementation, Compatibility testing, appropriate test approach, Risk and Impact analysis

Presentation & Collaboration

Criteria	Description
Content	Presentation deck
Demo	Working demo, logical flow
Story Telling	engaging explanation
Team Strategy & Collaboration	Team coordination, role clarity, balanced contributions, Claude AI usage
Added value	Topics implemented over and above
